Pump Problems Push Back Wisconsin Energy's Plans to Open 615 MW Oak Creek Coal-Fired Unit 2 in Wisconsin

Problems “with one of two main boiler feed pumps” will prevent Wisconsin Energy Corp. from assuming operation of the new unit until the end of January 2011, according to a company filing and the San Francisco Business Times. Bechtel Corp., the unit’s builder, is working to resolve the issues. Wisconsin Energy had expected to take over the operations from Bechtel by the end of November; that target was later pushed back into December.

Petroleum

Update: Government and Companies to Blame for Macondo Well Blowout in U.S. Gulf of Mexico: National Oil Spill Commission

The fatal April blowout at the Macondo well in the U.S. Gulf of Mexico was “not the product of a series of aberrational decisions made by rogue industry or government officials,” but rather the result of multiple “individual missteps and oversights by BP, Halliburton, and Transocean, which government lacked the authority, the necessary resources, and the technical expertise to prevent,” the National Commission on the BP Deepwater Horizon Oil Spill and Offshore Drilling said as it released the first chapter of its upcoming full report on the tragedy. The Commission warned that without “significant reform in both industry practices and government policies,” the “root causes” of the disaster “might well recur.”

Sunoco Slows 59,500 b/d FCC at 330,000 b/d Philadelphia, Pennsylvania Refinery by January 6

Sunoco reduced the gasoline-producing fluid catalytic cracking unit (FCC) by about 25 percent, traders said. It was not clear why the unit shut or when the company expected to resume normal operations.

Reuters, 11:56 January 6, 2011

Update: Crane Collapse Leads to Unit Shutdowns at Motiva's 285,000 b/d Port Arthur, Texas Refinery by January 6

A crane collapse led to the shutdown of multiple units – all the vacuum distillation units and a crude unit – and the reduction of a gasoline-making fluid catalytic cracking unit (FCC) at Motiva's 285,000 b/d Port Arthur, Texas refinery, sources familiar with the facility's operations said on January 6. The collapse occurred on January 4. It was not clear if the units went offline on the 4th, or if the company shut the units on the 6th. The crane was lifting pipes as part of an expansion project; the project is, by early 2012, expected to boost the refinery's capacity to 600,000 b/d. There were no injuries.

Update: Enterprise Products to Restart Propane Pipeline in New York, Ease Supply Issues across U.S. Northeast: EIA

Enterprise Products Partners LP received regulatory authorization to restart its Watkins Glen-to-Marathon, New York propane pipeline, and that restart should start to ease propane supply problems across the U.S. Northeast, the U.S. Energy Information Administration said on January 5. A leak forced shut the pipeline in late August. The line delivers propane to a terminal in Harford Mills, New York.

Massey Energy Coal Production Falls 800,000 Tons Short of Expectations during Fourth Quarter 2010

Massey Energy Company shipped just 8.9 million tons of coal in the fourth quarter of 2010, or 1.4 million tons less-than-planned, as quarterly production fell short of expectations by approximately 800,000 tons, it said on January 5. The company blamed the shipment shortfall on lower-than-anticipated production, inconsistent rail service, and delays of export shipments at ports. It blamed the slower production on fewer production shifts in deep mines, lower-than-anticipated productivity from deep mines and highwall miners, and higher ratios at surface mines.
